Managing Invasive Species by Eliminating Vehicle Transfer

Recognizing vehicles and recreational activities are increasing the spread of invasive species, Sheilah Kennedy started S-K Environmental utilizing the WB-500 Portable Invasive Species Rinse off and Reclaim System to assist in providing the strongest prevention tool available. Weed Wash Systems must be included in all EDRR, prevention and new invader programs. S-K Environmental has participated in studies with USFS, San Demas Research Center California, University of Notre Dame Aquatic Invasive Species Study, and demonstrations along the U.S. Okanogan County and British Columbia, Canada Border Crossing. The WB-500 is one of the strongest pieces of prevention equipment available to be incorporated into any invasive species program.
